DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Joel Wall on 03/04/2011.

3. The application has been amended as follows:

Claim 60 (Currently Amended) Apparatus, comprising:

means for detecting loss of a wireline connection between a first network subscriber and said network;

~~apparatus for~~ means for broadcasting a connect message via a wireless transceiver of said first network subscriber, said connect message received by a wireless transceiver of a second subscriber of said network;

if said second network subscriber has a wireline connection to said network,

~~apparatus for~~ means for relaying said connect message to network control of a network service provider of said network via said second subscriber wireline connection by encapsulating said connect message within a message addressed from said second subscriber and transmitting said encapsulated connect message over said second subscriber wireline connection to said network control; and

Art Unit: 2617

~~apparatus for~~ means for permitting said second network subscriber to forward data packets wirelessly received from said first network subscriber to said network service provider over said second subscriber wireline connection provided that said network subscriber previously received an indication of authorization of said first network subscriber from said network control in response to said encapsulated connect message.

Claim 61 (Currently Amended) The apparatus of claim 60 wherein said second network subscriber does not have said second subscriber wireline connection, said method further comprising;

~~apparatus for~~ means for broadcasting a second connect message via a wireless transceiver of said second network subscriber, said second connect message received by a wireless transceiver of a third subscriber of said network;

if said third network subscriber has a wireline connection to said network,

~~apparatus for~~ means for relaying said connect message to network control of a network service provider of said network via said third subscriber wireline connection by encapsulating both said second connect message and said encapsulated connect message within a message thereby obtaining a further encapsulated message, aid further encapsulated message being addressed from said third subscriber and transmitting said further encapsulated message over said third subscriber wireline connection to said network control; and

~~apparatus for~~ means for permitting said third network subscriber to forward data packets wirelessly received from said first network subscriber and said second network subscriber to said network service provider over said third subscriber wireline connection provided that said third network subscriber previously received an indication of authorization of said both first network

subscriber and said second network subscriber from said network control in response to said further encapsulated connect message.

Allowance

4. **Claims 1, 3, 5-9, 37, 39-43, 44, and 46-61** (renumbered as 1, 2, 3-7, 8, 9-13, 14, and 15-30, accordingly) are allowed.

5. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because the closest prior art: Gerszberg et al. (US 6,714,534), Farris et al. (US 5,751,789), and Cardina et al. (US 2004/0214569), fails to particularly disclose the limitations of: wherein said data relay being accomplished by receiving a connect message from said another wireless transceiver at said no more than one other wireless transceiver; encapsulating the connect message within a message addressed from said no more than one other wireless transceiver and transmitting the encapsulated connect message from the no more than one other wireless transceiver to the wireless transceiver; encapsulating the encapsulated connect message within a message addressed from the wireless transceiver and transmitting the further encapsulated connect message from the wireless transceiver over the wireline network to a network control; receiving an indication of authorization at the wireless transceiver and at the no more than one other wireless transceiver; receiving data packets from said another wireless transceiver at the no more than one other wireless transceiver; and based on the indication of authorization, forwarding the data packets between said no more than one other wireless transceiver to the wireless transceiver and from the wireless transceiver to the wireline network.

Claims 37, 44, 51, 52, 55, 56, 58, and 60 are allowed because the claims include similar limitations to the limitations in claim 1, above.

Art Unit: 2617

Claims 3, 5-9, 39-43, 46-50, 53, 54, 57, 59, and 61 are allowed for their dependency on independent claims that have been allowed.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
